

## Introduction

UpHealth Technologies want to develop a mobile application that will provide at-home healthcare services to people like uber and other service providers. Team D is responsible for the first step of application development.

## Project

UpHealth application will include a loading screen when the user launches the app. Users will be able to choose between logging in with an existing account or creating a new account. Users will get an introduction that will inform them how to use the app and what are the basic functionalities the app has

This application has the potential to help improve today's healthcare service providers to be able to manage their schedules and clients easier through UpHealth system and improve the client-side to be able to book a service easier and has more options to choose the service provider they want.

### Dang Nhat Kha Hoang

Dang is responsible for the Backend and Frontend of the application.
